## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

**DETAILED ACTION**

***Response to Amendment***

1. This office action is in response to the amendments received on 10/22/2008.

**EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Andrew Wilford on 11/06/2008.

The application has been amended as follows:

- a. The Abstract of the invention has been replaced as follows.

A device for maintaining fine alignment between an incoming spread spectrum signal and a locally generated code in a digital communication receiver comprises: a delay line for storing a plurality of consecutive samples (E-1, E, M, L, L+1) of the incoming spread spectrum signal; three digitally controlled interpolators for determining by interpolation between consecutive samples an interpolated early sample, an interpolated middle sample, and an interpolated late sample; two correlators for calculating an error signal as the difference between the energy of the symbols computed from the interpolated early and late samples; a circuit for generating a control signal for controlling the interpolation phase of the

digitally controlled interpolator for the early sample, and a digital non-linear filter, for smoothing the control signal of the interpolator for the early sample, enabling the update operation of the control signal only when the absolute value of the error signal at a time instant  $n$  is smaller than the absolute value of the same error signal at a time instant  $n-1$ .

- b. The one page Amendment to the specification submitted on 05/16/2005, has been inserted prior to the first paragraph of the original specification.
- c. The following changes to the drawings have been approved by the examiner and agreed upon by applicant: Applicant's representative agreed to properly label blocks 24, 26, 28, 22, 23, 66, and 68 of Fig. 10, block 26 of Fig. 11, and Block 74 of Fig. 17. In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.
- d. Claim 1, on page 3, line 6, has been amended as follows : second digitally controlled interpolator and thereby synchronizing the incoming spread spectrum signal with the locally generated code;
- e. Claim 5, on page 6, line 11, has been amended as follows : controlled interpolator and thereby synchronizing the incoming spread spectrum signal with the locally generated code;

***Allowable Subject Matter***

- 3. Claims 1-8 are allowed. The following is an examiner's statement of reasons for allowance: a comprehensive search of prior art of record failed to teach either alone or in combination a method for fine synchronizing of a digital receiver, wherein the method

comprising: calculating an error signal as the difference between the energy of the symbols computed from an interpolated early and late samples; and generating, from the error signal, a control signal for controlling the interpolation phase of a digitally controlled mid-time samples interpolator; wherein the step of generating a control signal comprises: extracting the sign of the error signal; accumulating the sign of the error signal for the generation of an intermediate control signal; calculating the absolute value of the error signal at a time instant  $n$ ; comparing the absolute value of the error signal at the time instant  $n$  with the absolute value of the error signal at a previous time instant  $n-1$ ; and updating the control signal to the value of the intermediate control signal if the absolute value of the error signal at time  $n$  is smaller than the absolute value of the same error signal at time  $n-1$ , maintaining otherwise unchanged the value of the control signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

#### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. (US 6,633,603) (US 2002/0127983).
